MINIMUM PRODUCT REQUIREMENTS

Common Product Minimum Requirements

Before creating your product, identify if it is a configurable product or a simple product. If your product has different LoRaWAN MHz bands, create a configurable product. A configurable product seems like a simple product with variations. Each option is a separate simple product with a unique SKU, making it possible to track inventory for each product variation.

Product options	To create configurations, go to <u>Add Product Options</u> section from your product page. Pick the attribute for which you want to propose variants (ex: ISM Band), select the values that you want to propose, and click Add Option
Product name	Manufacturer Name (with Initial capital letter) + Product name (with Initial capital letter) + Product Manufacturer Part number. The product name should not exceed a maximum of 65 characters

Product name	Initial capital letter) + Product Manufacturer Part number. The product name should not exceed a maximum of 65 characters (including spaces). Use this <u>character counter</u> if needed.
Manufacturer part number	It is very important since it corresponds to the number that identifies your product.
Price	Set the selling price for your product.
Tier pricing	Offer discounts based on product quantity. Start your tier pricing with a minimum of 2 units and set different quantity thresholds for each line.
Category	Select all the relevant boxes that correspond to your product. In case you can't find a suitable category or are unsure, opt for "Other" and reach out to us. We will assist you in the selection or create a new category if needed.
Short description	Provide a synthesis of your product, your clients need to understand your product's functionality in a maximum of 255 characters. The ideal short description is between 150-160 characters. Don't forget to include keywords to optimize SEO results. Use this character counter if needed.
