

ThingPark X

Enabling IoT network operators to create more value in the data and application layers

Activity's ThingPark X platform provides application enablers including data management and storage, and high performance algorithms and predictive analytics for key Industrial IoT domains such as manufacturing, utilities and agriculture. ThingPark X is complemented by a suite of integrated solutions including process modelling, machine learning engines, automated and real-time control algorithms.

End-to-end data life cycle

Key benefits

Easy Application Server Integration	<ul style="list-style-type: none">• Dedicated payload library allows for fast integration with any 3rd party application servers allowing for faster App development• Integrated cloud decoders allow connection with leading IoT Cloud platform providers like AWS, Azure or Bluemix
Analytics & Process management	<ul style="list-style-type: none">• Enables “making sense” of the data and supporting smart decisions in applications such as process optimisation or predictive maintenance• Vertical dedicated applications available for out-of-the-box implementation
Data management & transformation	<ul style="list-style-type: none">• Queuing management to avoid data loss as a result of problems• Protocol adaptation to transport 3rd party Apps over LoRa• Big Data storage with access right & quota management implementation
APIs	<ul style="list-style-type: none">• Device management through APIs for integration to 3rd party management tools
